

Biography Project - Web Design

Overview: Create a small website about a person that you find interesting. The website will consist of three pages (home, and two other pages of your choice)

- so you will need to build a navigation menu.

**** Use your lesson 11 as a template to get this started***

Create a Google document for your Works Cited

- collect your sources as you are working

For your navigation menu be sure to include:

- 1: A link to the first page of your biography site - this is often called "Home"
- 2: Links to the other two content pages within your biography site

Keep the main logo, and menu the same on all the pages.

Take some time to think about the page layout, colors, and what you would like the pages to look like.

It is easiest to get the main page done first (as the design process can take some time) - once you are happy with the look of the main page it will not take long to create the other content pages.

When complete:

- upload your Biography Project
- test it "live" to be sure everything works

Biography Site will include:

- **One css stylesheet** to be used on all your pages
- **Style:** pay attention to the colors, fonts, and layout designs that you use
 - the page should demonstrate creativity and your HTML/CSS skills
- **Sections:** container, header, menu, content, and footer
- **A logo** that you create, and a **tiling background** for the pages
- **Include Meta Tags** for description and keywords
- At least one list with a **custom icon** (rather than the default styles)
- **Comments** should be included to help someone (another programmer) know what the code is doing
