

## Practice Assignment: Adder

This program will ask the user for 2 numbers, add them up and print the result.  
The program is only going to accept integers - these can be negative or positive.

Enter, test and run the following code:

```
#include <cs50.h>
#include <stdio.h>
// this program will ask for 2 input numbers and add them together
// these are integers only

int main(void)
{
    printf("Please enter the first number: \n");
    int first_num = GetInt();

    printf("Please enter the second number: \n");
    int second_num = GetInt();

    int total = first_num + second_num;

    printf("The sum of %d and %d is %d\n", first_num, second_num, total);
}
```
