

Lab: calculator with a simple function

Get 2 numbers from the user

Get a operation choice from the user

1: addition

2: subtraction

Use a function to perform the calculation and print a message with results

Challenges:

- add operations for multiplication, division, and modulo
- use a function to print the menu choices

```
Console Shell  
first number: 6  
second number: 5  
  
Choose a mathematical operation:  
1: addition  
2: subtraction  
Your choice is: 1  
  
Here you go: 6.0 + 5.0 = 11.0  
> |
```

```
Console Shell  
first number: 55  
second number: 10  
  
Choose a mathematical operation:  
1: addition  
2: subtraction  
Your choice is: 2  
  
Here you go: 55.0 - 10.0 = 45.0  
> |
```
