

## Lab odd even

Ask the user for 2 different numbers

Print out the following information:

Tell us if the numbers are positive or negative

Tell us if each number is odd or even

Tell us which number is the highest or if they are the same

\*\* be sure your program works will all test cases (negative numbers, the same number, etc)

```
Give me a number: -30
Give me another number: 41

The first number is negative: -30
The second number is positive: 41

-30 is an even number
41 is an odd number

41 is larger than -30
```

```
Give me a number: 54
Give me another number: 54

The first number is positive: 54
The second number is positive: 54

54 is an even number
54 is an even number

54 and 54 are the same
```

```
Give me a number: 5
Give me another number: -2

The first number is positive: 5
The second number is negative: -2

5 is an odd number
-2 is an even number

5 is larger than -2
```
