

Sum Assignment

Create a program called **sum.c** within your unit1 folder

Your program will:

Ask the user for at least 2 integer numbers and specify the input range

If the input numbers do not match the range then print a message and stop

Add the input numbers and print out the numbers and the result

Check to see if the result is odd or even and print a message

Be sure to include comments, and run a style50 on your final code version

Your output should look something like the text below - but you might have some differences if you use more than one input, etc.

```
Enter a number from 1 to 100: 105
```

```
That input does not make sense - goodbye!
```

```
Enter a number from 1 to 100: 44
```

```
Enter another number from 1 to 100: 77
```

```
The total of 44 and 77 is 121
```

```
Number 121 is odd
```
