

## Lab: Five Wallets

Create an empty list to hold the money values in a set of wallets

Using the range function and a loop

- ask for at least 5 input values of money
- be sure the entries are in a mixed order and not just low to high
- add each entry to the list

Use the `min()`, `max()`, and `sum()` functions to print the appropriate answers as seen below.

Format output to 2 decimal places and use a \$ sign

```
Wallets Lab
```

```
What is in your wallet? 500.22
```

```
What is in your wallet? .05
```

```
What is in your wallet? 1.56
```

```
What is in your wallet? 35.43
```

```
What is in your wallet? 100.67
```

```
    The wallet with the most has $500.22 in it
```

```
    The wallet with the least has $0.05 in it
```

```
    The wallets all combined have $637.93 in them
```
